Low Voltage Oscillators

Today, billions of electronic devices are developed to suit consumer needs. As technology evolves, devices need to run at lower and lower voltages and this means that systems may need to have multiple supply rails. Because of this IQD have produced a range of frequency products that run at low voltages, giving a system designer the opportunity to develop systems that have a common supply rail. This approach produces reliable PCBAs that support PCB downsizing by reducing component count whilst realizing design goals.

IQD's low voltage CMOS clock oscillators are available at JEDEC standard voltage levels for CMOS devices of 0.9 V, 1.2 V and 1.5 V.
