IQD Job Specification

Role: Software Engineer Role

Company: IQD Frequency Product Ltd/Wurth Electronics eiSos

Location: Crewkerne UK

About Us

IQD Frequency Products Ltd has been providing electronic components for time and frequency control for nearly 50 years. Based predominantly in the UK and with a core user group of around 50 people, IQD push the development of our systems and customer interfaces to provide world leading functionalities.

Two years ago IQD became part of the Wurth eiSos group who provide a wide range of passive components to the global electronics industry. The eiSos group employs approx. 7000 people.

IQD are a dynamic company constantly looking to change and adapt to the market needs. As we are part of a large global company we need to operate with caution before implementation of any new systems and processes which could affect thousands of users

About this role

You will be a part of both the local IQD group and the eiSos software development team. Your role will be to bring the innovation in automation from IQD into the eiSos group.

Your software and IT training will be from the eiSos team in Germany, while your project focus will be from the local IQD team. A big part of your time will be project management.

Your main work space will be at the IQD headquarters in Crewkerne. You will also be working closely together with the colleagues of the eiSos software development team, which includes regular visits to the office in Germany.

The eiSos team develop software across the global business, while IQD push to further innovate our systems. A part of your role will be keeping up to speed with other projects in the eiSos and looking at when to implement these within IQD.

IQD run bespoke CRM tools that automate a great many functions of the engineering team from part number creation, data sheet generation, supply chain management to website parametric searches. Working closely with our Engineering team, you will be responsible for the day to day management of this system.

For the future, eiSos have chosen to adopt a similar approach to their database management and you will play an important role in the upcoming project to rebuild this software incorporating the full product range.

eiSos IT support has a centralised approach, and there is no direct IT support at IQD UK. While your role is not to be the day to day IT support, there will no doubt be times when you are called upon to be the interface between the users and the IT support team.

In our R&D lab we run highly sophisticated test equipment. These are run on some platforms including DOS, Win3.1, WinXP. We write a lot of our own software for these machines and your role will include support, installation and upgrading of software and hardware.

Main duties:
- Building strong relationships with all the teams at both IQD and eiSos
- Advocating for further software automation wherever possible
- Developing a deep understanding of the Goldmine CRM interface and the SQL data base
- Integrating IQD systems into Alpha Plan platform

- Working with crystal reports to fix bugs with the data sheets
- Learning about other software developments within eiSos
- Bringing IQD's software onto platforms supported within eiSos
- Interfacing between eiSos IT and IQD users on IT support

Key attributes:
- Understanding that project management is equally as important as coding
- Experienced .NET/C# developer
- Experience in SQL development
- Interest in the different working cultures of large and small companies and how to integrate them
- A belief that software automation is the way forward in business
- Ability to explain complex technical concepts clearly to colleagues
- A degree in computer science, engineering or a related field
- Trustworthy with strong integrity
- Positive attitude with sense of humour
- Approachable team player with good interpersonal skills

To apply, please email IQDHR@iqdfrequencyproducts.com with your CV and a short explanation of why the role interests you.
